States and another 5 millionaround the world but this pandemidike all other health climate and natural disasters issues does not affectall equally

## 02:48Carlos Mariscal

It affects us across a variety differensions And sol thought I'd set the scene by talking about some of these aspects right. So, it affects us according to incomeot adjusting for other factor, speople with higher incomes tend to live longer the proplewith lower incomes The widest difference is among men in the 99th percentile versus the botto fresvv.c 0 TT,			

actions Not only in the ways that they may have impact on our healt thout in terms of the ways in which they may or may not have an impact of the health of others And I think that swhy you're hearing you know- a number of directive shaving to do with the kinds of things that people take responsibility for that will help everyone and so that they you hear about masking.

## 09:38Françoise Baylis

It's not just to protect youIn fact we're not so sure it will protect you much as it will protect thers. And that's why you hear commentation you know working towards a vaccitheat againit's not just about protecting youit's about protecting others by you know over time getting to herehunity. So, I think the main thing for us tappreciate at the beginning this isn't somebody elselsesponsibility It's everybody's individual responsibility the benefit of the collective.

## 10:05 Carlos Mariscal

## 12:35Caleb Cage

## 16:00 Kathleen Masterson

I don't know ifl can speak entirely to that, but I know NPR did a really nicepiece on how they name viruses And there's actually an international committee and they work incredibly to incredibly the incredibly to incredibly the incredibly to incredibly the incredible in the incredibly the incredibly the incredibly the incredible in the incredible in

## 16:34 Kathleen Masterson

In terms of the name choicesthink those tend to beyou know other names tend to be erpetuated by people with a political genda for sure And I know we've seen that with the president believe actually there was some media note this ek that since he's hardwid, he at least referred to it a few times as coronavirus but that's actually incredibly new from all the coverage I've seen Sothat would be my best guess thoughmust admit!

risky environment So, you know, we've lived through a timeow westarted calling our essential workerspeople who are working in grocery stores at wasn't a thought before that the yere essential worker, but we need to have food on the table and we don't have to run the same risks do certain people

## 19:33 Françoise Baylis

And then, you know very often these are people in lower was iterations and there are people who can't afford to not go to work. That means they'repeople who can't afford to not puthemselves in certain kinds of risk privionments I think, you know one of the things that we see then is that often those jobs are correlated with people in certain racial and etholosters or groups Certainly, in our context we see people who work in meatpacking plants that have proven to where you much at risk. We see people that have come up from aribbearls lands because they're the pickers o they'reworking in agriculture for us and in that context again, those have turned out to be a atrisk environment

## 20:17Françoise Baylis

We havepeoplethat are doing home care workyouknow, attendance in nursing homestc. Again, often low-paid workers of particular ethnic backgroundsho are in atrisk situations So, I think the thing to take away is thathese are not new problems these are most wdisparities but then we have this massive health challenge come along the people who are most vulnerabled most at riskare these same people who've already had certain kinds of challenges that ween't responded to now the consequences of that are just really dire but visible

## 20:51 Françoise Baylis

So, it's not to say that the consequence weren't bad before but now we see people who are dying in in great numbers and I think, you know for many of us it's sort of, you know shocking because we've not really thought about some of the consequences of the ways in which we've structure tilves

## 21:06Carlos Mariscal

Yeahl-I mean it's one of these things thatst keeps getting hammered at home the every time. So, Françoise for those of you that don't know is joining us from Nova Scotia, if that's right. I looked upthe statistics of Washoe countywhich is where am right now compared to Nova Scotia, and we have something like 10 times the incidences that that you have something like three times as many deathsas well.

## 21:37Françoise Baylis

Well, let me share the numbers with you and just put them in context I'm in a provinceSo, Canada has 10 provinces I'm in one of the very small rovinces and one of the very poorprovinces Our total population is about a milliopeople, and we have zero community spreatale have three active cases. One is in artCU, okay. The other two active cases appeople who traveled came backand went into quarantine So they actually were following the rules and that's why we haven't had a roommunity spread even from that So, that's pretty striking when you hear million people and three cases ut one of the things! think is really important is that we have willingly or not withingly, depending on how

## 28:58 Kathleen Masterson

personal stories showing the impactlooking at what peole who are making that tough choideat, "oh I really need moneys of have togo backto my bartending jobbut I have as thma and m scared un that this could really harm me So, journalists work really really hard at finding that what's the one idea that I want to takehome here," and, "how do I do it in this story" and luckily we get a ly			

virusand act accordinglyight? Bycutting a hole out of mask in order to be defiant simplynot ollowing the rulesor yelling at me asm walking down the treet wearing a mask and those sorts of hingswhich happen	
34:54 Caleb Cage	-
So, I really do think this a moment of transformatioglobally, and this is how we're experiencing it nere in the UnitedStates. And because of that I'm hopeful for where we'll be 10 years from now	_
35:07Carlos Mariscal	
There's a thread that want to unify between everything that you sa <b>id</b> re. So,the technology connecting us imew ways <b>petorJel.ex(pe்ctingatetan(m)k6g(c)to</b> nTJ 0 Tc 0 Tw 3.985 0 Td [()]T 0.002 Tc -	0.008 Tw 12 fn

# 37:54 Françoise Baylis

And so you know what m worried about globally, is the fact that what's undergirding think a lot of this, is still a deep commitment to something like competition rather the llaboration And I think that's why you can sort of see people of like well you're not of me you're one of them so we don't agree so we don't talk. Ad I think the overarching thing is now did we allow something like this to be com 31.32 0 (e)]TJ (1 Tw 0.7 ila)10.6 (b)70 (o)(m)4zoo (d)2.2 i(u)j 082.402 0 Tll e i(e)]TJ 16 (o	)-6 (	0 Td [(o)-6

# 41:19Carlos Mariscal I think it might I mean, I think it's all of them from myperspective, think that we've been in this ongoing trench polarization since at least the late 60s t2004te(00(400)) The 224:05 t30 t0203 t0203

# 43:57 Kathleen Masterson It's interesting I wasthinking, as everyone was discussi**ng**w much of this is a new phenomen, cand did a little reading on 191.84nd the government then tried to branchask wearing as a p]TJ 0.006c2.9 (t)-ri.6 (7)-3.0

## 46:30 Kathleen Masterson

wouldn't go into a nursing home withoutearing a maskMaybe if you work with the derly [inaudible]

## 46:38Kathleen Masterson

... Im just trying to draw some of the spearallels to way that people care about their own family But again you have to have that rust built in if you're speaking with family member. If you're speaking with a stranger on the street, it's a lot harder.

### 46:50 Carlos Mariscal

I mean! think that all soundsight, and I think the pathos is the way do it. That's how! alwaysthink of when! talk to people disagree with! say one of my sayings from the very first episode bot to the point of an argument. It should just be to like resent an alternative and then latewhen they're mulling it over in bedike days later, they might come toyour side. But, so zooming outperhaps to the level of emegency response ecause! think that the individual conversation is one thing, do then the conversation that you have to have when you'talking to the public at larger the public in particular-I want to turn to a question from an anonymous attendee that's been upvoted quite a bit

## 47:43 Carlos Mariscal

It says the idea of freedom alwayseems to be the biggestactor whencoming to make decisiorts laws and restrictions—bw could we convince those to give some of their freedoms in order toelp? And then...and question this one awayhow would you in order to help othersOr that it is even possible a place that puts freedom on suching h pedestal domestically like the U.S.?tSese conflicting values it seems like we always talk about free diseasomething that François has said before. But I want to turn it to Caleb. Ike, how do you convince people that they should are about other things as well?

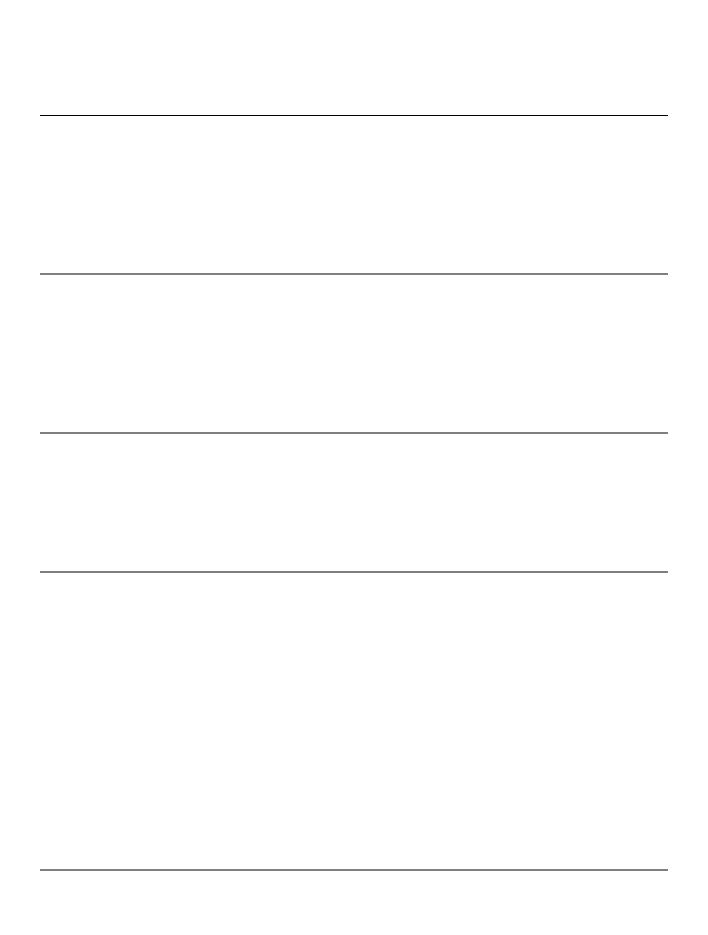

## 48:23 Caleb Cage

That is un that is a great questio And I think it's a I think it's a cultural challeng And I think the other speakers here have spoken about how prove the idea of individual liberton a pedestal and I'll say I'm one who by my nature in a lot of ways I do not like peopletelling me what to do And I do not like conventional wisdom winning the day when think for myself thank you very much. Those sorts of those sorts of thoughts think, are pretty typical.

## 49:00 Caleb Cage

However, I think over the last 15 yearshave gone from this idea of really focusing exclusively on that to-I like the Adam analogy that Françoiseused earlier that our individual liberty has impacts on others right? The famous Robert Nozick analogy of the right to swing my first o your nose, I think was Nozick who said that. But, you know, that's really not the practical way of now societies and communities work. One of the things that've been focusing on from an academic perspective ut from a practitioner perspective over the last few years is this idea of disaster resilience or crisis resilier for a paradigm shift from the emergency management concepts cause

## 61:31 Kathleen Masterson

We're seeing these huge division and it's true, the media really is reporting from cities and they're doing a good job whethey're doing that but we need more than that We need betterstorytelling and we need better representation of everything from socioeconomic class to race, and I don't just mean going o visit those people mean we need the need a to be more diverse in those ways as well. So, may be a little of the covidtopic, but that's my takeaway on the what we can better as media

## 62:01 Carlos Mariscal

That's great no. And I think I want to second everything that everybody hasid That'sbeenwonderful You guys have been suchgaeat panel. 6, I want to begin my thanks witthanking the Thought on Tap committee, including Daniel Enrique Perez, Caitlyn Earley, Meradith Oda, Callum Ingram, Stephen Pasqualina. Special thanks Broetton Rodriguez and special thanks to Trogram Chair, Katherine Fusco for help with this particular event want to thank Debra Moddelmog, Lisa McDonald, Chris Stanciand an unknown but almost certainly essential undergraduates tudent or two

## 62:32 Carlos Mariscal

I want to thank our partnerLaughingPlanet, and I want to thank our panelistsFrançoise Bayliscaleb Cageand KathleenMasterson But most of all I want to thank you forjoining us on this new seascamd on a new platform There is a survegivailable nowthat would tell you for you to let usknow what you thought of this evening. And so on behalf of Thught on Tap, I'm Carlos Mariscal Thank you and good night.
